MIS Doctoral Dissertations: 1987

Editor's Note

Each year the MIS Quarterly publishes a listing of MIS dissertations written during the previous year. This list of titles is updated annually to provide a complete, up-to-date index to the MIS dissertation literature.

The method used for identifying dissertation titles was previously described and validated [1]. Although this method ensures identification of most MIS dissertations, there will be occasional oversights. Undoubtedly, there are some we have missed this year and still others from previous years. We encourage additions to the bibliography.

This year's list includes 144 dissertations. Copies of the dissertations may be obtained through University Microfilms. University Microfilms can be reached at:

> University Microfilms International
> Dissertation Copies
> P.O. Box 1764
> Ann Arbor, Michigan 48106
> (800) 521-3042

Abstracts of the dissertations are found in Dissertation Abstracts International, which is available in most university libraries. The 500 to 1,000 word abstracts provide a short description of the research topic, research methodology, and findings.
